Wacom Ink SDK for verification

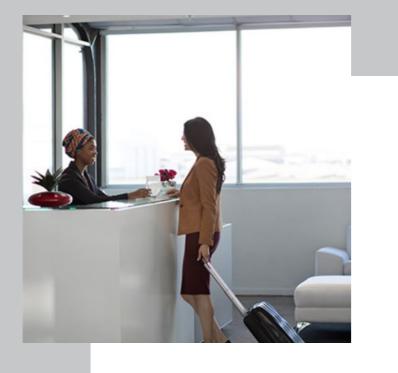

WOCOM[°] for Business

Wacom Ink SDK for verification What it is and how it works

What is the Wacom Ink SDK for verification?

A software-based method of digitally verifying handwritten eSignatures in real time. As such, it helps prevent fraud across a wide range of signature-centric workflows in financial services, healthcare and the public sector, and is far more accurate than visual checks by employees.

How does Wacom Ink SDK for verification work?

The SDK can be used to connect an application such as a CRM system, which is used to store genuine examples of customer signatures, to the SDK's signature verification engine.

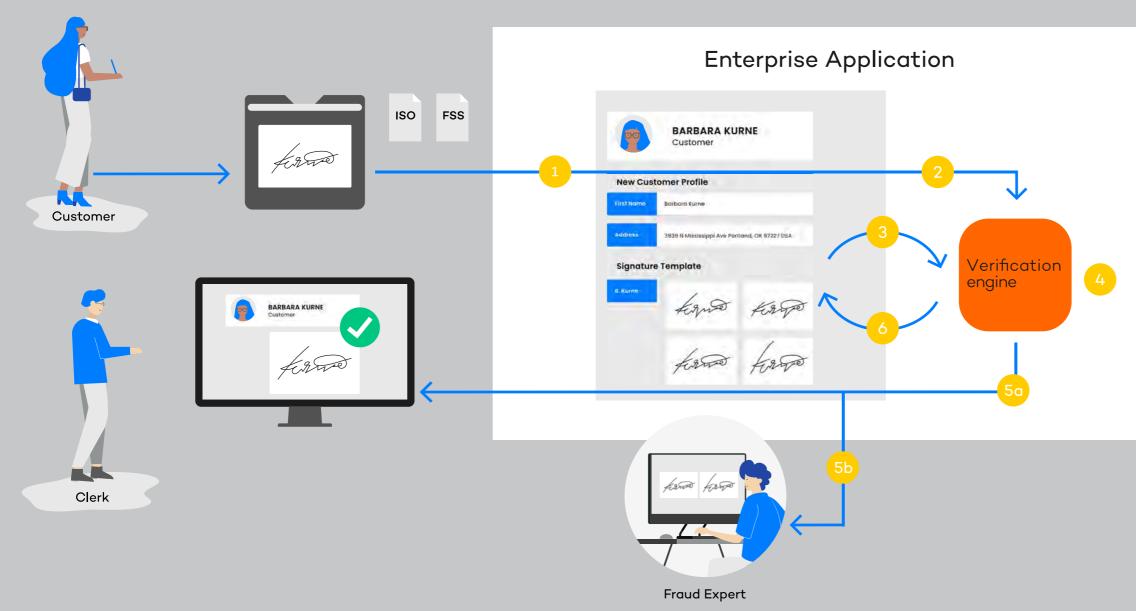

When a new handwritten eSignature is captured on a compatible device, the verification engine compares it with a set of genuine examples in real time. It then generates a simple, highly accurate and instant acceptance or rejection message. This message is based on a comparison score generated by the verification engine of between 0 and 1, where 0 is no match at all, and 1 is an exact match.

mocom. Ink SDK

Wacom Ink SDK for verification Sample workflow, financial services

Many transactions still require a handwritten signature for authorization. Wacom's signature verification technology helps bank clerks and anti-fraud teams spot fake signatures by comparing them against known genuine examples.

Wacom[®] for Business

- 1. Signature is captured using ISO or FSS format
- 2. Signature pushed to verification engine.
- 3. Signature profile is sent to verification engine
- 4. Verification engine compares captured signature with signature
- 5. Verification result checked a) immediately by the clerk, or b) later by a fraud expert
- 6. Signature profile updated and stored inside enterprise application

What makes Wacom's solution different?

Wacom's approach to signature verification is based on decades of expertise in developing handwritten eSignature hardware and software. Unlike alternative solutions, it:

Is optimized for two scenarios: unauthorized individuals faking a signature, and genuine signatories disguising their own signature.

Supports real-time digital and image-based signature comparison in a single solution.

Is compatible with Wacom devices and all third-party hardware that generates handwritten eSignatures in ISO format.

Enables verification starting with a single signature and allows progressive improvement in verification accuracy as more signatures are captured.

Provides a straightforward migration path from scanned paper-based signatures to a fully digital handwritten eSignature solution.

Mitigates compliance risks because no data is stored by the SDK, unlike server-based alternatives.

How is the SDK implemented?

The Wacom Ink SDK for verification is a lightweight SDK that enables fast, easy integration with existing applications and infrastructure.

It's compatible with any type of application such as a CRM system that can store a signature file, and any hardware that captures handwritten eSignatures in ISO format.

Unlike alternative solutions that require their own proprietary server infrastructure, the Wacom Ink SDK for verification is installed on the customer's own server, and is called by the relevant application via an API.

issues.

Wacom[®] for Business

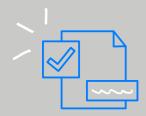

All captured eSignatures and data are also stored on the customer's server. and not by the SDK. This eliminates any potential compliance risks or data privacy

What are the typical use cases?

Financial Services

Verifying identities for significant transactions in real time and helping anti-fraud teams spot suspicious signature anomalies.

Public Sector

Preventing election fraud by verifying that postal votes in an election have only been completed and submitted by eligible citizens.

Healthcare

Protecting the authority of senior medical staff to approve specific procedures or medications, according to compliance requirements.

Education

Confirming the identity of students when they arrive at an examination center to take important tests.

$\gamma \dot{\Omega} \dot{\Omega} \dot{\Omega}$

Hospitality

Avoiding the theft of valuable goods by confirming authorized acceptance of deliveries at restaurants, etc.
